

**Past
input**

$$u(t-1)$$

$$u(t-2)$$

$$u(t-3)$$

**Nonlinear
targets**

$$u(t-1)^2$$

$$u(t-1)u(t-2)$$

$$P_3(u(t-\tau))$$

Question

Can a linear readout reconstruct these from reservoir state?

$$w^\top x(t)$$
